

Cereal Quality Diagram

The Cereal Quality Diagram shows the relationships between the three markers for grain quality; Hagberg falling number, specific weight and protein content.

The diagrams are made up of three overlapping circles with a number in each section. Each number relates to the percentage of the overall sample that falls within the specific ranges of each marker.

Please see the diagram below for an example:

Users of the online version are able to interrogate the data by selecting different groups, varieties or areas, along with the ability to change the specified ranges of the quality markers.

Notes:

1. In order to ensure a representative sample covering regions, varieties and data providers is given, some samples have been removed by random selection.
2. The online version will provide a breakdown of quality for any sample size over 100.
